nuveen

A TIAA Company

The Nuveen U.S. Core Impact Bond Fund seeks favorable returns versus the broad bond market while offering the opportunity to invest for impact.

Core bond allocation: Actively managed, high-quality bond portfolio pursues excess returns and improved risk-adjusted results versus a traditional broad-market benchmark

Environmental and social impact without sacrificing return: Prioritizes bonds that make direct and measurable impact across multiple sustainable and socioeconomic themes without compromising return potential

ESG leadership: ESG quality is assessed within each sector and industry, enabling the identification of best-in-class issuers across key bond market segments required to build a diversified portfolio and manage risk¹³

1 Reporting methodology

The Nuveen Responsible Investing team developed this report to provide an indication of the aggregate social and environmental impact created by the projects and organizations financed in part by the Fund. Given the difficulty of attributing impact in proportion to the size of the Fund's share of each bond issuance, the data reflect total impact generated by the project, program, or issuer rather than the Fund's share alone.

The report represents bonds that are classified under the Fund's proprietary impact framework and for which relevant data are available. All impact data are sourced from publicly available issuer disclosures at the bond or project level when possible, or the program or issuer level if not. Metrics selected for each impact theme reflect the information most commonly reported by issuers, and each metric includes data from between 2 and 21 bonds. In cases where the Fund has a large position in a certain issuer, we prioritize selecting metrics reported by that issuer.

A word on risk

Investing involves risk; principal loss is possible. There is no guarantee the Fund's investment objectives will be achieved. The Fund will include only holdings deemed consistent with the applicable **Environmental Social Governance (ESG)** guidelines. As a result, the universe of investments available to the Fund will be more limited than other funds that do not apply such guidelines. ESG criteria risk is the risk that because the Fund's ESG criteria exclude securities of certain issuers for nonfinancial reasons, the Fund may forgo some market opportunities available to funds that don't use these criteria. Credit risk arises from an issuer's ability to make interest and principal payments when due, as well as the prices of bonds declining when an issuer's credit quality is expected to deteriorate. Interest rate risk occurs when interest rates rise causing bond prices to fall. The issuer of a debt security may be able to repay principal prior to the security's maturity, known as prepayment (call) risk, because of an improvement in its credit quality or falling interest rates. In this event, this principal may have to be reinvested in securities with lower interest rates than the original securities, reducing the potential for income. Non-U.S. investments involve risks such as currency fluctuation, political and economic instability, lack of liquidity and differing legal and accounting standards. Investments in below investment grade or high yield securities are subject to liquidity risk and heightened credit risk.
